

EDS (Electrostatic Decontamination System)

Product Specifications

Rugged, portable, modular decontaminant delivery hardware system built to suit a variety of military applications. EDS is built to MIL specs and utilizes electrostatic spray technology to optimize the transfer of decontaminant to where it's needed, e.g. complex surfaces and particles suspended in the air.

Beneficial to Military and Civilian First-responder Users

- The EDS and its modules are built for rough handling and transportation.
- The EDS hardware is proven to be highly reliable and ready for use. All field maintenance procedures can be performed quickly by operators in full protective gear.
- The EDS can be set up for operation in less than 5 minutes.
- EDS was designed for one operator. The lightweight, man-portable design makes it easy for a single operator to effectively use the system (sprayer and/or light wand).

The EDS system is built to work with CET's state-of-the-art patent pending products, CDS® decontamination solution and Peridox® microbicide.

- Treatment Rate = 1000 ft in 15 min.
- Transfer Efficiency = 85%
- Weight 138.4 lbs
- Built to MIL Specifications
